

ELECTRIC BOOST

- TECO designs and installs electric boost systems
- Specially designed for capacity, glass quality and emission control purposes
- Testing is available for resistivity determination and electrode/glass compatibility
- Modeling is used for every boost application
- Power control systems to suit client requirements
- Single-phase, three-phase or three-to-two phase boost to suit your application
- Range of voltage and frequencies available

Electric boost hardware

TECO PROVIDES ELECTRIC BOOST SYSTEMS FOR MOST GLASS TYPES AND CAPACITIES
